

ABDELRAHMAN MAHMOUD NASR

Senior Android Developer • Android Team Lead

Cairo, Egypt | [+20 102 368 6787](tel:+201023686787) | abdelrahmanmahmoudnaser@gmail.com | linkedin.com/in/abdelrahman262 | [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven Senior Android Developer and Team Lead with 6+ years of experience architecting and delivering production-grade Android applications used by tens of thousands of active users. Currently driving Android engineering across two simultaneous remote products: Taxi Alwatani — Iraq's leading ride-hailing platform with 30,000+ active users — and Schoolie, a white-label school management system serving 40+ institutions across Egypt, UAE, and KSA. Also, the sole developer and architect of Rafiqy, a digital wellness Android product built on a privacy-first Accessibility Service engine. Expert in Kotlin, Jetpack Compose, and Clean Architecture; proven ability to lead engineering teams, own full codebase migrations, architect offline-first multi-module systems, and drive measurable performance improvements at production scale.

TECHNICAL SKILLS

Languages & UI: Kotlin, Java, Jetpack Compose, XML

Architecture: Clean Architecture, MVVM, MVI, Multi-Module Architecture, Repository Pattern, Use Cases

DI & Async: Koin, Koin Annotations, Dagger Hilt, Coroutines, Flow, StateFlow, SharedFlow

Networking: Ktor, Retrofit, WebSockets, Pusher, RESTful APIs, JSON

Persistence: Room, DataStore, Offline-First Architecture, Feed Caching & Sync

Maps & Location: Google Maps SDK, Directions API, Places API, Fused Location Provider

Firebase & Auth: Firebase Cloud Messaging (FCM), Firebase Analytics, Google OAuth 2.0

Services & Camera: Android Accessibility Service, UsageStats API, Foreground Services, Background Services, WorkManager, CameraX, Apache POI

Testing: Unit Testing, JUnit4, MockK

CI/CD & Tooling: CI/CD Pipelines, White-Label Build Automation, GitHub, Gradle, Git, Agile/Scrum

Other: Battery Optimization, Performance Optimization, Multi-Account Support, Privacy by Design, Anti-Uninstall Security, Material Design 3, GDPR Compliance

PROFESSIONAL EXPERIENCE

Android Team Lead • **Almyaar** Sep 2025 – Present

Baghdad, Iraq — Remote | Taxi Alwatani (ride-hailing, 30K+ users) | Student Way (school bus tracking)

- Lead a team of 3 Android developers on Taxi Alwatani — Iraq's primary ride-hailing platform serving 30,000+ active users — owning architecture direction, code reviews, PR approvals, and direct reporting to the PM and senior management.
- Architected and delivered a full production refactor of Taxi Alwatani using Kotlin, Jetpack Compose, Ktor, Dagger Hilt, and Clean Architecture across data/domain/presentation layers; pending Ministry of Transportation approval for public release.
- Drove full-cycle architecture and development of Student Way — a dual-app solution (parent + driver) featuring real-time GPS tracking, Pusher-powered live messaging, and bus schedule management.
- Integrated Google Maps SDK, Directions API, and Places API to power real-time driver routing, passenger pickup coordination, and location-based matching.
- Implemented foreground services for continuous live GPS tracking and background upload services, maintaining performance and battery efficiency under real-world conditions.
- Established unit test coverage for domain-layer use cases and ViewModels using JUnit4 and MockK, improving team-wide code reliability.
- Integrated FCM push notifications for real-time ride alerts and driver dispatch; implemented Pusher-powered in-app messaging for Student Way.
- Promoted to Team Lead within 4 months, taking ownership of architectural standards, sprint coordination, and cross-team technical strategy.

Android Developer — Solo • **SAGA (Schoolie)** Jun 2025 – Present ([Google Play](#))

Cairo, Egypt — Remote | White-label school management system | 40+ institutions across Egypt, UAE & KSA

Phase 1: Legacy Maintenance & Kotlin/Compose Migration (Jun 2025 – Jan 2026)

- Sole Android developer responsible for production maintenance and feature delivery for Schoolie — a white-label platform serving 40+ educational institutions across Egypt, UAE, and KSA.
- Migrated ~60% of the Android codebase from Java/XML to Kotlin and Jetpack Compose in under 7 months while simultaneously shipping new production features with zero disruption to live institutions.
- Rebuilt the broken real-time messaging system using WebSockets and developed a new daily reporting module, resolving critical communication failures across the school network.

Phase 2: Full Architectural Refactor (Jan 2026 – Present)

- Led end-to-end architectural refactor of Schoolie from scratch — redesigning onboarding, authentication, attendance, messaging, feed, and dashboard systems using Kotlin, Jetpack Compose, Ktor, Koin + Koin Annotations, and Clean Architecture.
- Architected multi-account support enabling seamless switching between multiple school accounts; built offline-first feed caching and background sync for reliability in low-connectivity environments.
- Designed and implemented CI/CD pipelines automating white-label build generation and release distribution across 40+ branded app variants — eliminating all manual per-school release overhead.
- Integrated WebSocket real-time messaging and FCM push notifications across all white-label variants; app in testing phase ahead of 2026/2027 academic year launch.

Android Developer • Develop Network

Sep 2024 – May 2025

Cairo, Egypt — Hybrid

- Served as sole Android developer, independently owning all Android product development across the company's portfolio using Jetpack Compose, CameraX, and Apache POI.
- Engineered scheduling logic, location-based services, and background processing; implemented app locking, overlay protection, and uninstall prevention for enterprise-grade security.
- Integrated ad monetization SDKs; maintained MVVM + Clean Architecture across a modular codebase ensuring long-term scalability.

Junior Android Developer • Vertex Code

Jan 2024 – Aug 2024

UK — Remote

- Developed and maintained production Android applications in Kotlin within a fully remote cross-functional team; contributed features, resolved bugs, and authored technical documentation.

Freelance Android Developer • Self-Employed

Feb 2020 – Present

Remote

Rafiqy (formerly Mostaqeem) — Solo Product — Digital Wellness App | 2024 – Present ([Google Play](#))

- Architected and built Rafiqy from scratch as sole developer — a privacy-first digital wellness Android application featuring intelligent app/domain blocking, short-form content inhibition (TikTok, YouTube Shorts, Instagram Reels), and a Guardian accountability framework with partner-verified unlocking, long-sentence cognitive friction, and timer-locked protections.
- Engineered a dual-engine, fully on-device blocking system: a Foreground Service using the UsageStats API for real-time app and domain monitoring, and a separate Accessibility Service for in-app content interception — detecting and suppressing YouTube Shorts, Instagram Reels, TikTok, and Instagram's home feed at the UI level. Zero personal browsing data is uploaded to servers.
- Designed and executed a full architectural refactor of the core Foreground Service: decomposed a 1,000+ line monolithic service into a modular, Clean Architecture multi-module system (:feature:protection, :feature:statistics, etc.) — delivering a significant and measurable reduction in battery consumption and a noticeable improvement in overall app performance.
- Implemented behavioral analytics (Dead Clicks tracking, Time Saved dashboards, comparative usage patterns), Google OAuth 2.0, cloud-synced harmful content filters, and anti-uninstall security hooks across the platform.
- Applied Kotlin Coroutines and Flow throughout with structured concurrency and clear separation of concerns — dramatically improving resource efficiency over the original implementation.

Client Projects — Custom Android solutions for diverse clients | 2020 – Present

- Delivered tailored Android applications across multiple industries using Kotlin, Jetpack Compose, and Clean Architecture. Managed full lifecycle from requirements through Play Store deployment.
